PROJECTS / OPEN-SOURCE

Income and Expenses Tracker for Small Business | [Link](#)

Javascript, Django, Html and CSS

- The Income and Expenses Tracker is a web-based application designed to assist small businesses in effectively managing their financial transactions. The application allows users to track income and expenses, add categories, perform currency conversions, edit, delete, and add expenses, and download data in Excel and CSV file formats. Additionally, the application includes an email verification feature during the registration process to ensure secure user authentication.

Event Management Using Django | [Link](#)

Javascript, Django, Html and CSS

- The Event Management system is a web-based application built using the Django framework. It aims to streamline the process of managing events by providing features such as event registration, event categories, user registration, tracking completed events, managing event members, and enabling event editing, adding, updating, and deleting. The application includes a user-friendly dashboard to facilitate efficient event management.

Pollstar - Question and Answer Platform | [Link](#)

Javascript, Django, Html and CSS

- Pollstar is a simple question and answer platform that allows users to post questions and receive answers from the community. The platform aims to facilitate knowledge sharing, discussions, and engagement by providing an intuitive interface for users to interact with questions and provide their insights.

Personal MoneyTracker | [Link](#)

React, Nodejs, CSS and Html

- The Personal MoneyTracker is a web-based application that helps users track their personal finances by setting a monthly budget, recording expenses, and managing shared expenses with other users. The application provides a user-friendly interface for adding, editing, and deleting expenses, as well as tracking the remaining budget amount. It aims to assist individuals in effectively managing their expenses and promoting financial awareness.

Student Management System | [Link](#)

Javascript, Django, Html, CSS and MYSQL

- The Student Management System is a web-based application that leverages a MySQL database to efficiently manage student-related information in educational institutions. The system enables administrators, teachers, and staff to add students, record attendance, manage course details, and organize subjects. By utilizing a robust database system, the application ensures reliable data storage, retrieval, and manipulation.

Quiz App | Link

Java and xml

- The Quiz App is an Android application developed using Java and XML in Android Studio. The app allows administrators to post quiz questions, and users can register and answer the quiz. The app aims to provide an interactive and engaging platform for users to test their knowledge while allowing administrators to create and manage quiz content.

CERTIFICATIONS

- Crash course on Python - **Coursera**
- Front-end Development - **Udemy**
- Python nano degree course - **Prepinsta Prime**
- Time Series Analysis real world use-cases in Python - **Udemy**
- Java Certification - **SpringBoard by Infosys**
- Algorithm, Data Collection and starting to code - **Coursera**
- PrepSat Jobathon certificate - **Prepinsta Prime**

HONORS & AWARDS

- 1.Participated in National level Smart India Hackathon 2022 organised by Govt of India.
